

## Redux Initialization:

Following are the steps you have to take before start learning:

- 1) Firstly, install Node js
- 2) Secondly, create a new folder called Redux Demo or whatever you want and open VS code in it.
- 3) Thirdly, open terminal and run the command **npm init –yes**

The above command initialized the default package.json file with default settings.

- 4) Towards next step, run the command on terminal npm install redux. Now your VS Code looks like the following

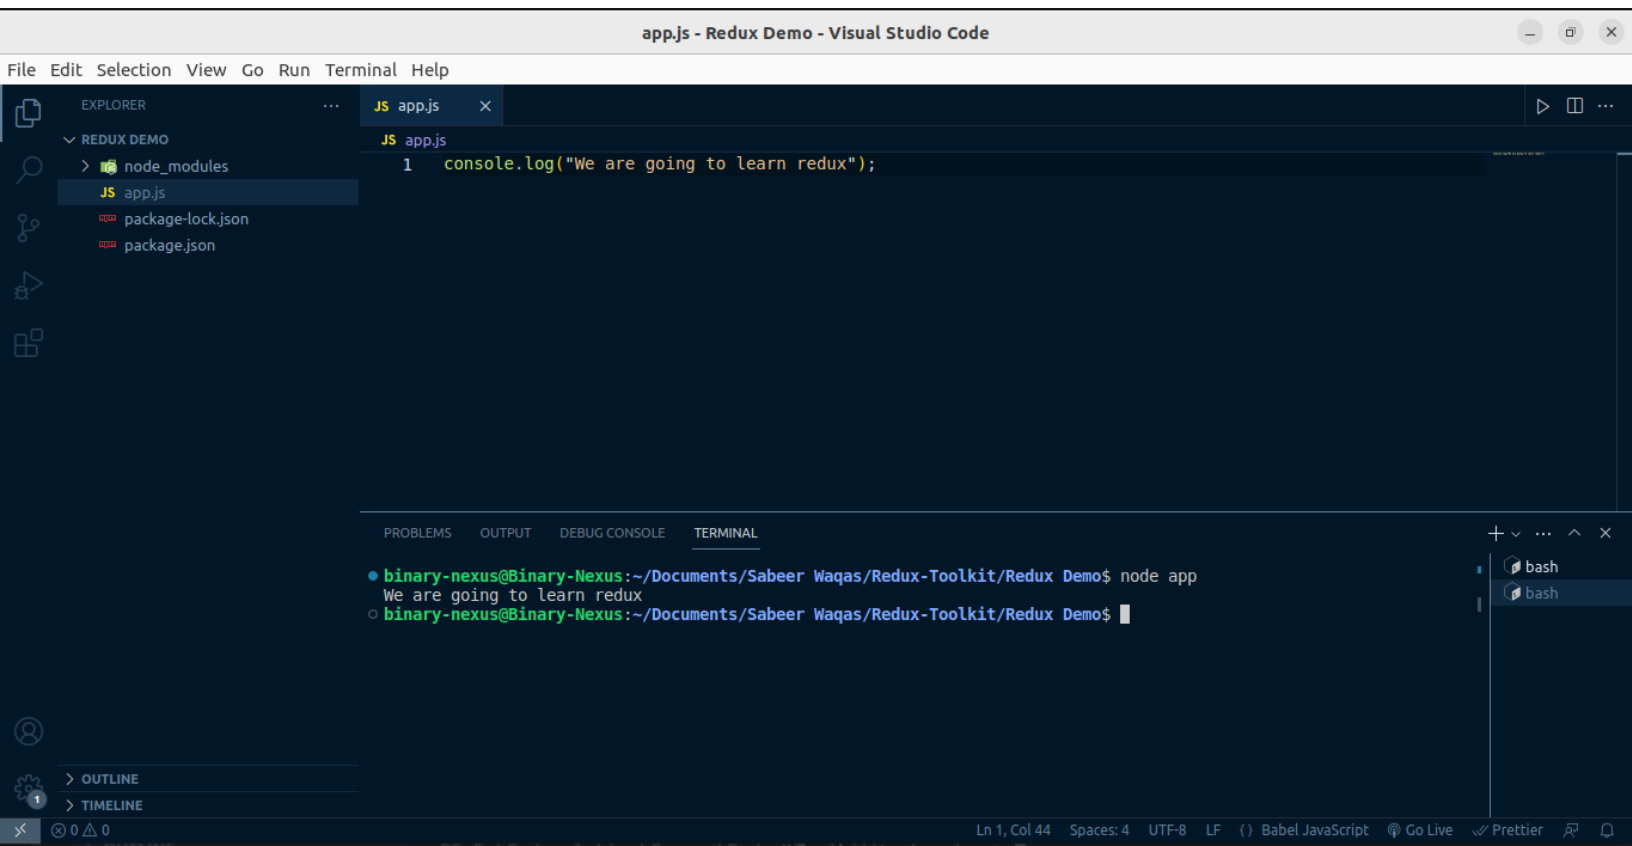

The fifth and final step is to create a javascript file to write code

After creating JS file write `console.log("We are going to learn redux")`

and open terminal write node **your JS file name without JS extension**.

Now your VS Code looks like the following

Now we are ready to start learning redux. See you in next content.
